

GABOS  
software

GABOS Software  
software provider  
**for your clinic**

[WWW.GABOS.PL](http://WWW.GABOS.PL)

**Proper functioning of the clinic requires a comprehensive approach to patient care and the institution itself.**

Gabos Software has developed the **Wide Medical Solution** software for demanding clients - from small clinics to geographically distributed branches.

The queues to the registration window are transferred to the eServices for registering and controlling the queue via Internet.

We offer an extensive paging system that manages and controls the movement of patients in the clinic.

# Clinic management software

The open-ended healthcare solution includes all the functionalities necessary for unit operation and patient care, focusing on performance and enhancing competitiveness.

## ✓ Many specialties

Family medical care, outpatient specialist care, occupational healthcare, diagnostic laboratories - all integrated in one solution

## ✓ Schedules

Managing multiple schedules of doctors of different specializations, appointing patients "per hour", handling queues (including AP).

## ✓ Many payers

It does not matter how the service is provided by the unit, in our solution we support both public payer (NFZ), post-paid and commercial.

## Settlements with doctors

Each contract doctor may have an individual way of settling for completed services with full accounting and valuation available right away.

## Agreements management

Many contracts both public (NFZ) and commercial, many pricelists, promotional campaigns - it gives full flexibility in offering services.

## Analyses and reports

All the data we collect can also be analyzed through a simple-to-use reporting and analysis system.

Instead of filing cabinets with paper medical records, you can have an electronic patient record available to your doctor anytime, anywhere.
